Delivering

Business benefits

Influx enables you to enjoy benefits of outsourcing without offshoring from Third world countries. Business model is designed to serve and satisfy client's Most demanding needs through effective operations management. constant and continuous improvement of end-to-end delivery model

Data Warehousing Services

on data warehousing to leverage

We have assimilated the industries best practices in our data warehousing services. Our development and support process model is based upon the experience gained by our client engagements on various segments & verticals in the industry.

INFLUX process model of Data warehouse consists of four stages. This facilitate repaid application development, reduce the costs and risks associated with Data warehousing. To do this we use proven methodology like scooping Data warehouse project engagements, validating the application design, identifying products for support implementation aspects and BI applications are provided.

Our Team building customized flexible plan which maps the cliental needs based on time /process driven delivery, which suits the needs and a handy tool for expansion in getting in to new business avenues.

We Create a logical application design based on the business and technical requirements as per implementation road map for the present and the future needs of the clients.

Focus on data warehouse administration and management. Depending on the needs of the client, this can be a one-time engagement or an ongoing effort.

This process model is flexible, it is designed to support incremental and iterative development. It also encapsulates an onsite / offshore execution model, which provides a cost benefit, solutions and helps the client to optimise project cycle delivery time by distributing the application development, thereby enabling round the clock implementation.
